

Manideep Salla

Senior Full Stack Developer

Ph: +1 (604)-300-7742 | devmanideep.s@gmail.com | [linkedin.com/in/manideep-salla](https://www.linkedin.com/in/manideep-salla) | Abbotsford, BC, Canada

PROFESSIONAL SUMMARY

- Full Stack Developer with over **10+ years of experience** in **analysis, design, development, modernization, and support** of enterprise web applications using **Angular, React, C#, and .NET technologies** across Government, Banking, Healthcare, and Enterprise domains.
- Strong experience developing scalable frontend applications using **Angular 15/16/17/19/20, React (Hooks, Redux, React Router), TypeScript, RxJS, NgRx, Reactive Forms, SCSS, Bootstrap**, and **enterprise design systems** for secure and responsive user experiences.
- Skilled in crafting responsive, accessible, and pixel-perfect web interfaces using **HTML/HTML5, CSS3, SCSS, Bootstrap**, and enterprise design systems including **GoA Design System, ICG Design System, and Angular Material** to deliver consistent, standards-compliant, and cross-browser-compatible user interfaces across enterprise applications.
- Collaborates closely with UX/frontend designers in recurring **design review sessions** for every enhancement and new feature, validating usability and user-perspective improvements prior to implementation, in alignment with **human-centered design** practices.
- Experienced in developing secure **RESTful APIs, microservices**, and backend services using **ASP.NET Core, .NET 8/10, ASP.NET MVC, Web API, Entity Framework Core, Dapper, SQL Server**, and **layered architecture patterns**.
- Hands-on experience in supporting and modernizing legacy enterprise applications built using **ASP.NET Web Forms, .NET Framework, WCF/SOAP services, ADO.NET, IIS-hosted applications**, and traditional **n-tier architecture patterns**.
- Experienced in modernization initiatives involving **Angular upgrades, API refactoring, cloud transformation, secure onboarding workflows**, and **enterprise application modernization**.
- Strong experience implementing **Identity and Access Management (IAM)** solutions using **Keycloak, OAuth2, OpenID Connect (OIDC)**, and **JWT-based authentication and identity propagation**, with centralized **RBAC/PBAC authorization** enforced through custom **AuthorizationHandlers (PEP)** and a **Policy Decision Point (PDP)** backed by a relational **Access Control System (ACS)**.
- Experience working with enterprise integration technologies including **REST APIs, WCF/SOAP services, secure API communication**, and integration with internal and external enterprise systems.
- Experienced in designing and publishing API contracts using **Swagger/OpenAPI** to support internal team collaboration and client-facing RESTful API documentation, enabling consistent integration across enterprise microservices and frontend applications.
- Proficient in **cloud-native, containerized**, and **CI/CD-driven** enterprise environments using **Azure App Services, Azure Monitor, Application Insights, Redis caching, Docker, OpenShift, Azure DevOps, GitHub Actions, CI/CD pipelines**, and automated deployment workflows.
- Regularly leverages **AI-assisted development tools** including **GitHub Copilot, Claude, and ChatGPT** for code generation, unit testing, technical documentation, log/ticket analysis, SQL generation, and pull request reviews, and has built AI-assisted automation for dependency/license auditing to improve engineering productivity.
- Experienced in developing automated unit tests using **NUnit, xUnit, and Moq**, validated through team CI and pre-push workflows, and performing integration testing using **Swagger/OpenAPI** and **Postman** to verify REST APIs, authentication workflows, and business logic across enterprise applications.
- Experienced in **Agile/Scrum delivery, production support, troubleshooting, release management, code reviews, performance optimization**, and collaborating with cross-functional teams to deliver scalable and maintainable enterprise solutions.

CORE COMPETENCIES

Full Stack Development (.NET + Angular + React) • Enterprise Application Modernization • Angular 15/16/17/19/20, React (Hooks, Redux), TypeScript, RxJS, NgRx • HTML/HTML5, CSS3, SCSS & Bootstrap • Enterprise Design Systems (GoA, ICG, Angular Material) • Swagger/OpenAPI & API Documentation • ASP.NET Core, Web API & Microservices • Identity & Access Management (IAM) • OAuth2, OpenID Connect (OIDC), JWT • RBAC / PBAC Authorization • Keycloak Integration & Access Control Systems • RESTful API Development & System Integrations • Entity Framework Core & Dapper • SQL Server & Relational Database Design • Redis Caching • Cloud-Native & Containerized Applications • OpenShift, Docker & CI/CD Pipelines • Azure DevOps & GitHub Actions • Secure Onboarding & Invitation Workflows • Enterprise UI Architecture & State Management • UX Collaboration & Design Review • Production Support & Release Management • AI-Assisted Development & Engineering Productivity Tools • Agile/Scrum Development Methodologies

TECHNICAL SKILLS

Programming Languages	C#, TypeScript, JavaScript, SQL, HTML5, CSS3/SCSS, JSON
Frontend Technologies	Angular (v6–v20), AngularJS, React (Hooks, Redux, React Router), RxJS, NgRx, Reactive Forms, HTML/HTML5, CSS3, SCSS, Bootstrap, Angular Material, GoA Design System, ICG Design System, jQuery
Backend Technologies	ASP.NET Core (.NET 6/8/10), ASP.NET MVC, ASP.NET Web API, .NET Framework 4.x, Entity Framework Core, Dapper, LINQ, ADO.NET, REST APIs, Microservices Architecture, WCF/SOAP Services
Identity & Access Management (IAM)	Keycloak, OAuth2, OpenID Connect (OIDC), JWT Authentication, RBAC, PBAC, AuthorizationHandlers, Policy-Based Authorization, Access Control Systems (ACS)
Databases	SQL Server 2012/2014/2019, PostgreSQL, MongoDB (working knowledge), Redis
Cloud & DevOps	Microsoft Azure, Azure App Services, Azure Monitor, Application Insights, Azure DevOps, GitHub Actions, Docker, OpenShift, CI/CD Pipelines, YAML Pipelines
AI-Assisted Development	GitHub Copilot, Claude, ChatGPT – code generation, unit testing, technical documentation, log/ticket analysis, SQL generation, PR review, dependency/license audit automation
Tools & Platforms	Visual Studio 2022/2019/2017, Visual Studio Code, SSMS, Postman, Swagger/OpenAPI, Splunk, Jira, Confluence, Git, Bitbucket, TFS, Husky (Git Hooks), TeamCity
Testing Frameworks	NUnit, xUnit, Jest, Karma, Moq, Automated Unit Testing, API Integration Testing (Swagger/OpenAPI, Postman)
Architecture & Methodologies	Microservices, RESTful APIs, N-Tier Architecture, Clean Architecture, CQRS, OOP, SOLID Principles, Agile/Scrum, Enterprise Application Modernization
Operating Systems	Windows, Linux

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer | Feb 2024 – Present
Vantix Systems (Government of Alberta – ARLO) | Edmonton, AB (Remote)
Project: ARLO – Alberta Registry for Land Online

ARLO is a Government of Alberta enterprise land registry modernization platform designed to provide secure digital access to land title and registry services for both internal government users and external organizations such as registry agents, lawyers, lenders, surveyors, and businesses. As part of the User Access Management (UAM) team, the project

focused on secure onboarding workflows, role-based access management, invitation and account-management processes, ARLO Pro onboarding, and centralized access-control solutions integrated with enterprise identity and authorization systems. The platform modernizes legacy land registry operations by delivering scalable, cloud-enabled, and secure online workflows using modern Angular and .NET-based enterprise architecture.

Responsibilities:

- Led the upgrade of the ARLO UAM backend from **.NET 8 to .NET 10**, migrating **ASP.NET Core APIs**, resolving breaking changes, updating NuGet package dependencies, and validating compatibility across **Dapper**, **Entity Framework Core**, and **Keycloak/OIDC** authentication middleware deployed on OpenShift.
- Developed and maintained enterprise web applications using **Angular 20** and **ASP.NET Core 8** for the Government of Alberta ARLO platform.
- Worked as part of the **User Access Management (UAM)** team implementing secure onboarding, invitation, and account-management workflows for internal and external users, including **ARLO Pro onboarding**.
- Designed and implemented responsive and accessible frontend features using **Angular Reactive Forms**, **GoA Design System** components, **SCSS**, and reusable UI patterns.
- Partnered with the team's frontend designer in recurring **design review sessions** for every enhancement and new feature, evaluating designs from a user perspective and incorporating usability feedback prior to implementation, as a standing team practice aligned with GoA's human-centered design approach.
- Built reusable Angular components, directives, route guards, selectors, signals, and permission-driven UI workflows using **NgRx-based centralized state management**.
- Built **role-based and policy-based access control (RBAC/PBAC)** across frontend and backend applications using **Keycloak**, **OAuth2**, and **OpenID Connect (OIDC)** for authentication and identity propagation, with the **Keycloak user identifier (JWT sub claim)** passed to a centralized **Policy Decision Point (PDP)** for authorization evaluation against the **UAM/ACS** database.
- Developed custom **AuthorizationHandlers** acting as **Policy Enforcement Points (PEP)** that extracted the **Keycloak user identifier** from JWT tokens and delegated authorization decisions to a centralized **Policy Decision Point (PDP)** backed by the **Access Control System (ACS)**, which evaluated user, role, permission group, and permission mappings to enforce Permit and Deny decisions on protected API endpoints.
- Developed and enhanced secure RESTful APIs and microservices using **ASP.NET Core**, **Dapper**, **Entity Framework Core**, **SQL Server**, and layered architecture patterns.
- Implemented **Redis-based caching** for ARLO Pro user onboarding, internal user onboarding, and the account recovery tool, reducing redundant database calls and improving response times across high-traffic onboarding workflows.
- Implemented backend business logic, validations, **audit logging**, error handling, and standardized **API response handling** for onboarding and user-management workflows.
- Worked extensively on modules related to **User Access Management**, including Add Team Member, invitation management, role assignment, role hierarchy validation, account selection workflows, and secure navigation access handling.
- Integrated **Active Directory (AD)** search workflows and implemented secure user invitation and onboarding processes for enterprise government users.
- Developed reusable **access-control libraries** and shared authorization patterns to support scalable permission enforcement across APIs and UI modules.
- Contributed to centralized **access-control frameworks** and reusable authorization components adopted across multiple APIs and enterprise UI modules.
- Developed and enhanced backend features by implementing and modifying **Commands**, **Queries**, and **Handlers** within the existing **CQRS request/handler architecture using Mediator**, supporting **UAM** workflows including user

onboarding, invitation management, account management, role assignment, permission management, and account recovery.

- Participated in **Angular modernization** and upgrade initiatives, including dependency upgrades, framework compatibility fixes, reusable component improvements, and standalone migration readiness activities.
- Worked with **Nx monorepo architecture** and shared enterprise libraries to support scalable frontend and backend application development.
- Optimized frontend reactive flows, **state synchronization**, and API interactions to improve performance, reduce unnecessary re-renders, and resolve UI navigation/state persistence issues.
- Improved frontend **state-management workflows** and reduced redundant API calls, enhancing page responsiveness and improving user navigation experience across onboarding and account-management modules.
- Implemented and optimized **Dapper-based database operations**, SQL queries, and relational data mappings for secure and efficient enterprise workflows.
- Designed and implemented **database schema changes**, including table modifications, column additions, constraints, and index updates to support new business requirements and application enhancements.
- Developed and maintained **SQL seeding scripts** to populate reference data, roles, permission groups, and access-control configurations across **Development, SIT, UAT, and Production** environments.
- Created and executed **database migration and deployment scripts** for schema updates and data transformations, ensuring backward compatibility and minimal downtime during enterprise releases.
- Developed complex **T-SQL scripts** for permission mapping, role assignments, data corrections, and bulk updates while maintaining data integrity and transactional consistency.
- Collaborated with development and DevOps teams to validate database changes, perform release verification, troubleshoot deployment issues, and support **rollback strategies** during production deployments.
- Optimized **SQL queries, indexes, and Dapper-based data access logic** to improve API performance and reduce execution time for user onboarding and access-management workflows.
- Supported containerized application deployments using **Docker** and **OpenShift** across Development, SIT, UAT, and Production environments.
- Worked with **Azure DevOps, GitHub Actions, and YAML-based CI/CD pipelines** to support automated build, deployment, release validation, and environment management activities.
- Used **GitHub Copilot** to assist with Angular unit test development, improving test coverage, accelerating frontend testing workflows, and supporting maintainable **Jest/Karma-based** test implementations.
- Leveraged **GitHub Copilot** in day-to-day development work to accelerate code generation, boilerplate scaffolding, refactoring, and routine engineering tasks, improving developer productivity and reducing turnaround time on feature delivery.
- Regularly used **GitHub Copilot, Claude, and ChatGPT** to draft technical documentation, analyze logs and support tickets, generate SQL queries, assist with pull request reviews, and automate recurring engineering tasks.
- Built an **AI-assisted dependency-audit automation** that scans the .NET codebase for outdated and non-MIT-licensed NuGet packages, identifies packages that have moved to commercial licensing, and recommends compliant replacements — reducing manual license-compliance effort.
- Investigated **technical spikes** and proof-of-concept research tasks to evaluate new approaches, libraries, and implementation options, using **AI-assisted tools** to speed up exploration and inform technical decisions.
- Documented spike findings, root cause analysis, and recommendations in **Confluence** to support knowledge sharing, technical alignment, and faster issue resolution across the team.
- Participated in **production support**, deployment validation, smoke testing, root cause analysis, hotfix implementation, and troubleshooting of authentication, authorization, onboarding, and API-related issues.

- Applied **Splunk**, **OpenShift logs**, **Azure Monitor**, and **Application Insights** for production monitoring, diagnostics, logging, and issue investigation across enterprise environments.
- Collaborated closely with architects, QA teams, DevOps engineers, business analysts, and cross-functional stakeholders in **Agile/Scrum** delivery and release cycles.
- Developed and maintained automated unit tests using **NUnit** for backend business logic, **AuthorizationHandlers**, and service components, integrated into the team's **Husky Git pre-push hook** workflow that automatically ran the unit test suite before code could be pushed to the shared repository.
- Performed integration testing using **Swagger/OpenAPI** and **Postman** to validate REST API endpoints, **Keycloak/OIDC** authentication and authorization flows, request/response payloads, database interactions, and end-to-end workflows across Development and UAT environments.
- Mentored junior developers through detailed code reviews and architectural guidance on **Angular** and **ASP.NET Core** best practices, helping improve code quality and consistency across the User Access Management module.

Environment: Angular 20, TypeScript, RxJS, NgRx, Reactive Forms, SCSS, Angular Material, GoA Design System, Nx Monorepo, ASP.NET Core 8/10, .NET 10, C#, CQRS, Mediator, REST APIs, Microservices, Entity Framework Core, Dapper, SQL Server, Redis, Keycloak, OAuth2, OpenID Connect (OIDC), JWT Authentication, RBAC, PBAC, AuthorizationHandlers, Azure App Services, Azure Monitor, Application Insights, OpenShift, Docker, Azure DevOps, GitHub Actions, CI/CD Pipelines, GitHub Copilot, Claude, ChatGPT, NUnit, Husky, Swagger/OpenAPI, Postman, Jest, Karma, Splunk, Git, Agile/Scrum.

Senior Full Stack Developer | Dec 2021 – Jan 2024

Virtusa Inc (Citi) | Toronto, ON (Remote)

Project: Client Communication Repository (CCR) – Citi Bank

The Client Communication Repository (CCR) is an enterprise banking communication platform developed for Citi Bank to securely manage, deliver, and track business-critical client communications across multiple global channels. The platform enables business users to create, approve, distribute, and monitor customer notifications using standardized templates while ensuring regulatory compliance, auditability, and multilingual support. As part of the Full Stack Development team, the project focused on communication lifecycle management, maker-checker approval workflows, reporting dashboards, template management, secure document delivery, read receipt tracking, bounced email handling, and role-based access control integrated with enterprise identity systems. The platform modernized legacy communication processes by delivering a scalable microservices-based architecture using Angular, .NET Core, REST APIs, Azure cloud services, messaging infrastructure, and enterprise integration patterns, supporting millions of secure client communications with high availability and performance.

Responsibilities:

- Actively involved in designing and developing Angular components for Communication Reports, Dashboard, and Communication stages using **TypeScript**, **HTML5**, and **CSS**.
- Spearheaded the development of scalable and high-performance applications leveraging **.NET Core 6** and modern enterprise application architecture.
- Utilized a shared library of reusable Angular components, styles, and guidelines based on the **ICG Design System** to develop self-service internal web applications.
- Collaborated extensively with business stakeholders and internal teams to develop detailed **requirement specifications** and **test plans**.
- Developed frontend application features using **Angular 10/13**, **TypeScript**, **HTML5**, **SCSS**, **Bootstrap**, **Node.js**, and **Visual Studio Code**.
- Made heavy use of **Angular CLI** to generate modules, components, models, resolvers, and services.
- Implemented validations using both **reactive** and template-driven forms.
- Relied on **Angular Material** components including pagination, modal dialogs, date pickers, dropdowns, tables, and autocomplete controls.

- Added **Web API** functions (GET, POST) using HTTP Client and **Observables**.
- Designed and developed business logic components using **C#, OOP principles, SOLID design patterns**, and abstraction-based architecture.
- Set up **Dependency Injection** in **.NET Core 6** to improve modularity, maintainability, and testability of application components.
- Deployed API and Angular UI layers using **UDeploy** across enterprise environments.
- Utilized **Angular** features including ngModel, ngIf, ngFor, **Input/Output Event Emitters**, Class Binding, and **Two-Way Data Binding** to build dynamic UI components.
- Utilized **Angular lifecycle hooks** including ngOnInit, ngOnChanges, ngOnDestroy, and ngAfterViewInit for component initialization and rendering workflows.
- Implemented route guards including **CanActivate, CanActivateChild, CanDeactivate**, and resolver guards for secure routing and navigation handling.
- Developed automated unit tests using **NUnit** together with the **Moq Framework** for Web API services and controllers, mocking repositories and external dependencies to validate business logic, integrated into the team's **TeamCity CI pipeline** that built the solution and ran the automated unit test suite on every commit.
- Performed integration testing using **Swagger/OpenAPI** and **Postman** to validate REST APIs, request/response payloads, authentication workflows, and end-to-end service interactions across Development, QA, and UAT environments.
- Introduced **Aspose** library integration for export-to-Excel functionality.
- Developed **email notification services** for enterprise communication workflows.
- Participated in **deployment validation**, sanity testing, and **smoke testing** across QA, SIT, UAT, and Production environments.
- Relied heavily on **RxJS Observables** for asynchronous server communication, data mapping, and error handling.
- Implemented routing in **Single Page Applications (SPA)** using **Angular Router** modules.
- Leveraged **Data Access Layer (DAL)** patterns to retrieve and manage data within Web API applications.
- Worked with relational database objects, including **stored procedures** and **SQL scripts**, to support backend business workflows and data validation rules.
- Created and modified **SQL scripts** for data retrieval, validation, reporting, and backend service requirements against **SQL Server** and **Oracle** databases.
- Integrated database results with .NET backend services using **models, DTOs, Entity Framework, LINQ**, and **Data Access Layer** patterns, mapping and transforming data returned to Angular UI components through REST APIs.
- Implemented advanced performance optimization techniques within **.NET Core 6** applications, focusing on asynchronous programming, memory management, and resource utilization.
- Conducted **profiling and performance analysis** to identify bottlenecks and improve overall system performance and application responsiveness.
- Utilized **Git** and **Bitbucket** for source control, code commits, pull operations, and version management.
- Created services within the **business logic layer** based on enterprise business rules and application requirements.
- Developed custom **Angular guard services** to prevent invalid routing and unauthorized navigation access.
- Utilized **Angular pipes** for formatting and transforming input data within UI components.
- Implemented **module-level lazy loading** to improve frontend scalability and application performance.
- Assessed runtime execution of **RxJS subscribe** methods to optimize page load speed and frontend responsiveness.
- Participated in **Agile/Scrum** software development processes and **Test-Driven Development (TDD)** practices.

- Guided junior team members through code review sessions, sharing best practices in **Angular** component design and **.NET Core** development to strengthen overall code quality across the team.

Environment: *NET Framework 4.8, .Net 6, C#, ASP.NET, Web API, Angular 10/13, CSS3/SCSS, Bootstrap, HTML 5, Visual Studio 2022/2019/2017, JSON, LINQ, SQL Server, Stored Procedures, SQL Scripts, Models, DTOs, Bitbucket, Bootstrap, Agile Methodology, Jira, TeamCity, NUnit, Moq, Swagger/OpenAPI, Postman, UDeploy, Visual Studio Code, Oracle SQL Developer.*

Full Stack Developer | Mar 2020 – Nov 2021

Synmek | Toronto, ON (Remote)

Project: Enterprise Business Management Portal

The Enterprise Business Management Portal is a cloud-based enterprise application developed to streamline and digitize core business operations through a centralized, secure, and scalable platform. The solution enables organizations to efficiently manage business workflows, operational data, and user interactions while improving productivity, collaboration, and process automation across departments. As part of the Full Stack Development team, the project focused on role-based user management, business workflow automation, dashboard and reporting modules, data management, secure REST API integration, responsive web interfaces, and cloud-based deployment solutions integrated with enterprise authentication and authorization systems. The platform modernized traditional business processes by leveraging a scalable multi-tier architecture built using Angular 9, ASP.NET MVC 5, ASP.NET Web API, C#, .NET Framework 4.8, Entity Framework, SQL Server, Azure App Services, Azure Resource Manager (ARM), REST APIs, TypeScript, RxJS, HTML5, SCSS, Bootstrap, Jenkins, and Azure DevOps, delivering a secure, maintainable, and high-performance enterprise solution.

Responsibilities:

- Participated with end users, product owners, and business analysts to understand **business requirements** and application workflows.
- Worked closely with internal stakeholders to create **requirement specifications**, functional documentation, and **test plans**.
- Developed frontend application features using **Angular 9, TypeScript**, HTML5, SCSS, Bootstrap, Node.js, and Visual Studio Code.
- Implemented **JWT authorization token** handling to enable role-based UI visibility and secure access workflows.
- Utilized built-in **Angular pipes** and developed custom pipes for dynamic grid search and data transformation.
- Made heavy use of **RxJS Observables** for asynchronous server communication, data mapping, JSON transformation, and error handling.
- Created reusable repositories using the **Repository Pattern, Generics**, and **Interfaces** to support scalable application architecture.
- Utilized **Moment.js** and **DatePicker** libraries to render dynamic and customized UI components.
- Created **ARM (Azure Resource Manager) templates** and provisioned Azure App Services, resource groups, and management resources.
- Deployed both API and Angular UI layers using **Azure App Services** across enterprise environments.
- Designed advanced .NET applications using **C#, ASP.NET MVC 5/6, .NET Web APIs, Entity Framework, LINQ**, and layered data access architecture.
- Analyzed application issues and collaborated with end users to identify optimal **technical solutions**.
- Followed **Clean Architecture** principles to maintain loosely coupled and maintainable application layers.
- Developed automated unit tests using **xUnit** for ASP.NET MVC and Web API business logic as part of **Test-Driven Development (TDD)** practices, improving application reliability and maintainability.
- Performed integration testing of REST APIs using **Swagger/OpenAPI** and **Postman** to validate application workflows, request/response payloads, and backend service integrations during development and QA.

- Participated in **Agile/Scrum** software development processes and **Test-Driven Development (TDD)** practices.
- Applied **multithreading techniques** to improve application performance and concurrent processing capabilities.
- Used **Entity Framework** as a data access layer for RESTful ASP.NET Web API services and SQL Server integration.
- Worked across all layers of **n-tier architecture** including UI, business logic, and data access layers.
- Applied **Data Access Layer (DAL)** patterns and **Entity Framework ORM** for database interaction and data retrieval workflows.
- Defined **model classes** based on UI mockups and middle-tier application requirements.
- Relied heavily on **RESTful Web APIs**, Web Services, **LINQ**, and **Entity Framework 6.0**.
- Implemented automated build and deployment processes in **VSTS** using **Jenkins** to support enterprise **CI/CD pipelines**.
- Provided **code review** feedback and technical guidance to junior developers, promoting clean coding standards and consistent **design patterns** across frontend and backend modules.

Environment: NET Framework 4.8, C#, ASP.NET MVC5, Web API, Angular 9, CSS3/SCSS, Bootstrap, HTML 5, Visual Studio 2019/2017, Microsoft Azure, JSON, Entity Framework, LINQ, xUnit, Swagger/OpenAPI, Postman, SourceTree, Bitbucket, Bootstrap, Agile Methodology, Jira.

Full Stack Developer | Jan 2019 – Feb 2020

Teknokrafft Inc | Toronto, ON

Responsibilities:

- Collaborated with business analysts and end users to gather **business requirements** and translate them into scalable enterprise web application features.
- Developed responsive Single Page Application (SPA) modules using **React 16.8+**, **JavaScript (ES6)**, **JSX**, **HTML5**, **CSS3**, and **Bootstrap**.
- Built reusable **React** components for customer onboarding, reporting dashboards, search screens, and administrative modules.
- Developed applications using functional components with **React Hooks** (useState, useEffect) for component lifecycle and state management.
- Managed application state using **Redux** for shared application data and React Hooks for component-level state.
- Implemented client-side routing using **React Router** to provide seamless navigation across application modules.
- Integrated React applications with **ASP.NET Web APIs** using **Axios** to retrieve, update, and display business data.
- Developed **dynamic forms** with **client-side validation**, search, filtering, sorting, and responsive user interfaces.
- Worked with **Entity Framework Code First** as the data access layer for ASP.NET MVC applications.
- Designed and developed **RESTful Web APIs** for enterprise service integration and business functionality.
- Created and consumed **WCF Services** and XML Web Services to integrate with legacy enterprise applications and external systems.
- Utilized **LINQ to Entities** for efficient data retrieval, filtering, and query operations.
- Applied **Object-Oriented Programming (OOP)** principles and reusable design practices to build maintainable enterprise applications.
- Developed **SSRS** (SQL Server Reporting Services) reports to support operational and business reporting requirements.
- Built and maintained **SSIS** (SQL Server Integration Services) packages to import, transform, and process enterprise data from multiple sources.
- Created **Windows Services** to automate scheduled data processing and **SSIS** package execution.

- Worked with **SQL Server 2012**, including stored procedures, views, joins, indexes, and performance optimization.
- Participated in **Agile Scrum** ceremonies including sprint planning, daily stand-ups, sprint reviews, retrospectives, and backlog refinement.
- Used **TFS** for source control, work item tracking, code reviews, branching, and continuous integration.
- Developed unit tests using **NUnit** for ASP.NET MVC and Web API components to validate business logic and data access operations.
- Performed integration testing using **Swagger** and **Postman** to verify REST API functionality and request/response payloads during development and QA.
- Assisted in deploying and maintaining enterprise applications on **Microsoft Azure** environments and collaborated with QA during release and production support activities.

Environment: React 16.8, JavaScript (ES6), JSX, React Hooks, Redux, React Router, Axios, HTML5, CSS3, Bootstrap, .NET Framework 4.5, C#, ASP.NET MVC 5, ASP.NET Web API, Entity Framework Code First, LINQ, SQL Server 2012, SSRS, SSIS, WCF, XML Web Services, Node.js, npm, Visual Studio 2015, Visual Studio Code, Microsoft Azure, JSON, NUnit, Swagger, Postman, TFS, Agile Scrum, Jira.

.NET Developer | Jan 2016 – Dec 2018

Sapphire Technologies | Hyderabad, India

Responsibilities:

- Worked as a .NET Developer in designing and developing enterprise applications using Visual Studio 2015, **.NET Framework 4.5**, **C#**, **ASP.NET**, **SQL Server 2012**, **LINQ**, and **Entity Framework**.
- Created web pages for various business workflows using **ASP.NET**, **AJAX**, **JavaScript**, **jQuery**, and **CSS**, and integrated them with backend business logic layers.
- Designed and implemented web application pages using **ASP.NET MVC** and **C#**.
- Developed web applications using **ASP.NET MVC**, **AngularJS**, **JSON**, and **AJAX**-based frontend architectures.
- Designed and developed MVC-based web applications utilizing **OOP principles**, reusable components, and enterprise application design patterns.
- Relied on **C#** code-behind implementations for developing custom controls and server controls.
- Added **ASP.NET MVC** pattern mechanisms to display product catalogs, categories, and dynamic application content.
- Used **TFS** for source code management, version control, documentation management, and project collaboration workflows.
- Designed and implemented application authentication mechanisms using **.NET Framework**, **ASP.NET MVC**, and **IIS security models**.
- Developed and consumed **WCF Web Services** for enterprise communication and integration workflows.
- Relied heavily on **n-tier architecture** including UI, Business Logic Layer, and Data Access Layer implementations along with exposure to **Service-Oriented Architecture (SOA)** concepts.
- Created **WCF Services** to retrieve and send client-side information without full-page postbacks.
- Utilized **data binding** techniques to bind server controls with database-driven application data.
- Consumed **Web APIs** to extend legacy application capabilities and improve enterprise application integrations.
- Worked in **Agile** development environments to deliver quality solutions within project timelines.
- Leveraged **MVC design patterns** to implement business logic and frontend application workflows.
- Developed enterprise **web services** for Administrative Services, Configuration Services, and Pricing Services modules.
- Contributed to the development of MMPS applications using **MVC architecture** and enterprise web application development practices.

- Utilized **JIRA** for bug tracking, task management, issue resolution, and Agile workflow coordination.
- Reviewed code contributions from junior developers and offered guidance on **C# .NET** and **ASP.NET** best practices to support team-wide code quality standards.

Environment: .NET Framework 4.0, Visual Studio 2010/2012, C#, ASP.NET MVC, WEB API, HTML, TFS, SQL Server Reporting Services (SSRS), WCF, CSS, JavaScript, jQuery, JSON, Bootstrap, AJAX, AngularJS, Entity Framework, Unit Tests, Jira, IIS 6.0, Oracle.

EDUCATION

Bachelor of Technology (Mechanical Engineering)

Jawaharlal Nehru Technological University (JNTU), India | **2012 - 2016**

PROJECT EXAMPLES

Project Example 1: ARLO (Alberta Registry and Land Online) – Government of Alberta

1. Overview: The ARLO (Alberta Registry and Land Online) program is a Government of Alberta digital modernization initiative focused on delivering secure, scalable, and cloud-ready land title and registry services. As a Senior Full Stack Developer on the **User Access Management (UAM)** team, I developed and enhanced enterprise applications using **Angular, ASP.NET Core, REST APIs, SQL Server**, and Azure/OpenShift-based technologies. My responsibilities included implementing secure onboarding and invitation workflows, identity and access management, **RBAC/PBAC authorization, CQRS-based request/handler workflows using Mediator**, reusable platform components, API integrations, accessibility improvements using **Government of Alberta Design System** components, automated unit testing, integration testing, and production support. I collaborated with architects, product owners, UX designers, QA, DevOps, and business stakeholders within Agile Scrum teams to deliver functionality across multiple releases.

2. Sector & Team Size: Public sector — Government of Alberta. Team size: 10 members, including digital architect, full stack developers, service designers, UX designers, QA, product owner, and Scrum team members.

3. Skills, Tools & Technology: *Angular 20, TypeScript, NgRx, RxJS, Reactive Forms, GoA Design System, Nx Monorepo, ASP.NET Core 8/10, .NET 10, C#, REST APIs, Microservices, CQRS, Mediator, Entity Framework Core, Dapper, SQL Server, Redis, Keycloak, OAuth2, OpenID Connect, JWT, RBAC, PBAC, AuthorizationHandlers, Azure App Services, Azure Monitor, Application Insights, OpenShift, Docker, Azure DevOps, GitHub Actions, Git, NUnit, Husky Git Hooks, Swagger/OpenAPI, Postman, Jest, Karma, Splunk, GitHub Copilot, Claude, ChatGPT, Agile Scrum.*

Project Example 2: Client Communication Repository (CCR) – Citi Bank

1. Overview: The Client Communication Repository (CCR) was an enterprise banking communication platform developed for Citi Bank to securely manage, deliver, and track business-critical client communications across multiple global channels. As a Senior Full Stack Developer, I developed and enhanced **Angular** and **ASP.NET Core** applications, **REST APIs, microservices**, reporting dashboards, template management workflows, **maker-checker approval workflows**, secure document delivery, email notification services, and read-receipt/bounce tracking features. I worked on frontend components, backend services, unit testing, integration testing, deployment validation, and production support while collaborating with business stakeholders, QA, DevOps, and Agile Scrum teams to deliver secure, scalable, and high-performance banking solutions.

2. Sector & Team Size: Private sector — Banking / Financial Services. Team size: 10 members, including architects, technical leads, full stack developers, QA engineers, DevOps engineers, business analysts, product owner, and Scrum team members.

3. Skills, Tools & Technology: *Angular 10/13, TypeScript, RxJS, Angular Material, HTML5, SCSS, Bootstrap, ASP.NET Core 6, .NET Framework 4.8, C#, ASP.NET Web API, REST APIs, Microservices, Entity Framework, LINQ, SQL Server, Oracle SQL Developer, Dependency Injection, SOLID Principles, Data Access Layer patterns, OAuth2, OpenID Connect, JWT, Git, Bitbucket, TeamCity, UDeploy, NUnit, Moq, Swagger/OpenAPI, Postman, Visual Studio 2022/2019/2017, Visual Studio Code, Jira, Agile Scrum.*
